MaxTherm in Smurfit West Point Va USA

- White Top / Liner,
- PM3, 7,20 m wide, 2nd top dryer position,
- 1000 MPM,
- MaxTherm 500 CFM.

Customer comments for justification for a 3rd felt trial from Cristini for the 2nd top dryer position:

- PM3 2nd Top Dryer fabric has been a Weavexx's Ultracoil (poly) design...but they have hydrolyzed in 2-3 months.
- *[Weavexx tried both of their anti-hydrolysis designs (Exx2 and Exx5) in years past, at higher cost than the Ultracoil, and would wear out in 2-3 months - softer ryton yarns].*
- The fourth design we ran was a Cristini Maxthem Thermo Spiral felt...it was removed after 4.6 months and the condition was still great...very little wear and no hydrolysis...we should have left it on for 4 more months.
- The second Cristini Maxthem Thermo Spiral felt has been on for over 4 months and still has no sign of hydrolysis or wear issues; we anticipate it will remain on the machine for many more months.
- Savings = 23% PLUS two less clothing changes per year.
